Your bones are continuously changing — new bone is made and old bone is broken down. When you're young, your body makes new bone faster than it breaks down old bone, and your bone mass increases. Most people reach their peak bone mass around age 30. After that, bone remodeling continues, but you lose slightly more bone mass than you gain.

Bone & Joints Section | Credihealth Blog

In Ayurveda, the bones and joints are considered a site of vata in the body—meaning that they have a general affinity for vata, and are particularly prone to vata imbalances. This reality is only reinforced by the fact that the joints themselves are made up of a lot of empty space—which also corresponds with vata.
