The same goes for the Original Twig example where "usernames" is an array of strings. The Drupal 8 Twig example on the other hand requires an array of renderable objects. This is actually the fundamental difference between Drupal 8 Twig and the original Twig. Drupal 8 Twig "prints" both plain text and renderable arrays.

Filters in Twig can be used to modify variables. Filters are separated from the variable by a pipe symbol. They may have optional arguments in parentheses. Multiple filters can be chained. The

Access PDF Drupal 8 Theming With Twig

output of one filter is applied to the next.
Example: `{{ content|safe_join(", ")|lower }}`
You may have to render an item
before you filter it: `{{ item|render|filter }}`
