We find support for a sister relationship between turtles and a bird/crocodilian clade, and for rejecting both the Haemothermia hypothesis (birds and mammals as sister taxa) and the placement of turtles as basal within the phylogenetic tree for amniote animals.

### Interordinal Relationships of Birds and Other Reptiles ...

The amniotes, reptiles, birds, and mammals, are distinguished from amphibians by their terrestrially-adapted egg, which is protected by amniotic membranes. The evolution of amniotic membranes meant that the embryos of amniotes were now provided with their own aquatic environment, which led to less dependence on water for development, allowing the amniotes to branch out into drier environments.

REPTILES. Reptiles are a group of animals that include snakes, lizards, crocodiles, turtles and tuatara. They are cold-blooded, egg laying vertebrates with scales or scutes rather than fur or feathers. The study of reptiles is known as herpetology which also includes the study of amphibians such as frogs and newts.
