Ph Properties Of Buffer Solutions A buffer is a water-based solution containing a mixture of either an acid and its conjugate base, or a base and its conjugate acid. The acids and bases used in a buffer are quite weak and when a small amount of a strong acid or base is added, the pH doesn't change significantly.

Ph Properties Of Buffer Solutions Pre Lab Answers

Properties of Buffers. Introduction.

Buffers resist changes in pH when acids or bases are added to them. An effective buffer system contains significant quantities of a specific weak acid and its conjugate base. There are two common
