sodium chloride. The gram formula weight of sodium chloride is 58.44 g/mol. Answer: To make a 1 M solution of sodium chloride, dissolve 58.44 g sodium chloride in 500 mL water in a 1000-mL volumetric flask. When all the solid is dissolved and the solution is at room temperature, dilute to the mark and invert the flask several times to mix.

## **Kinematic Equations: Sample Problems and Solutions**

Problem #1: If you dilute 175 mL of a 1.6 M solution of LiCl to 1.0 L, determine the new concentration of the solution.

Solution:  $M_1 V_1 = M_2 V_2$  (1.6 mol/L)  
(175 mL) = (x) (1000 mL)  $x = 0.28$  M.

Note that 1000 mL was used rather than 1.0 L. Remember to keep the volume
