Description. Steel Structures: Controlling Behavior Through Design by Robert Englekirk. In 1988 the American Institute of Steel Construction changed the method from Allowable Stress Design (ASD) to Load Resistance Factor Design (LRFD) on which the building code is based. This text develops a treatment of steel which is behavior-oriented and explains the causation for the LRFD approach.

STEEL STRUCTURES: CONTROLLING BEHAVIOR THROUGH DESIGN. This text, by an engineer and professor actively involved in the design of structures, presents an underlying understanding of the design process which is behavior-based and incorporates LRFD (load resistance factor design). A cohesive treatment of post yield behavior promotes a fundamental understanding of the objectives of a seismic design.

it is the ability to redistribute the load. Simple beam is determinate. Fixed beam is indeterminate by 2 degrees so it has two redundant actions. fixed supported beam is more better as indeterminate structure can redistribute the load. When load increases support becomes plastic and it turns into a simply supported beam. But simply supported does not go through the stage of plastic
